alternative and renewable energy sources already play a very decisive role in the development of human society helping to fulfill increasing energy demands from both industrialized and underdeveloped countries as well as economic needs which must comply with a decarbonized economy decreasing the energy impact on the global environment among these alternative energy sources fuels such as biodiesel methanol and methane are good examples of how the previous design can be achieved as these fuels can be obtained from renewable sources used in applications such as transportation systems electricity generation fuel conversion and even for electricity storage with reduced impact on air emissions this special issue includes papers on new and innovative technical developments or approaches reviews case studies as well as assessment papers from different disciplines which are relevant to the optimization of biodiesel methane methanol production systems simultaneously resulting in air quality improvement

the sector of fine chemicals including pharmaceuticals agrochemicals dyes and pigments fragrances and flavours intermediates and performance chemicals is growing fast for obvious reasons chemistry is a key to the success in developing new processes for fine chemicals however as a rule chemists formulate results of their work as recipes which usually lack important information for process development fine chemicals manufacture technology and engineering is intended to show what is needed to make the recipe more useful for process development purposes and to transform the recipe into an industrial process that will be safe environmentally friendly and profitable the goal of this book is to form a bridge between chemists and specialists of all other branches involved in the scale up of new processes or modification of existing processes with both a minimum effort and risk and maximum profit when commercializing the process new techniques for scale up and optimization of existing processes and improvements in the utilization of process equipment that have been developed in recent years are presented in the book

comprehensive and practical guide to the selection and design of a wide range of chemical process equipment emphasis is placed on real world process design and

performance of equipment provides examples of successful applications with numerous drawings graphs and tables to show the functioning and performance of the equipment equipment rating forms and manufacturers questionnaires are collected to illustrate the data essential to process design includes a chapter on equipment cost and addresses economic concerns practical guide to the selection and design of a wide range of chemical process equipment examples of successful real world applications are provided fully revised and updated with valuable shortcut methods rules of thumb and equipment rating forms and manufacturers questionnaires have been collected to demonstrate the design process many line drawings graphs and tables illustrate performance data chapter 19 has been expanded to cover new information on membrane separation approximately 100 worked examples are included end of chapter references also are provided
